                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Searched:
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Molecule type: DNA
A; Residues: 1-513 <SHO>
A; Experimental source: strain L27
C; Comment: This is the most abundantly produced cellulase in this filamentous fungus; it C; Genetics:
A; Genetics:
A; Genetics:
A; Genetics:
A; Genetics:
A; Genetics:
C; Function:
A; Introns: 154/2; 386/3
C; Function:
A; Description: catalyzes the hydrolysis of 1,4-beta-D-glucosidic bonds in cellulose to 1
C; Superfamily; cellulose 1,4-beta-cellobiosidase I; fungal cellulose-binding domain homology conditions signal sequence #status predicted <SIG>
F; 18-513/Product: cellulose 1,4-beta-cellobiosidase I #status predicted <MAT>
F; 482-513/Domain: fungal cellulose-binding domain homology <FCB>

MOL. Microbiol. 4:759-767(1990).

-1- FUNCTION: THIS ENZYME CATALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLUCOSIDIC LINKAGES IN CELLULOSE, LICHENIN AND CEREAL BETA-D-GLUCANS. EGB IS MOST ACTIVE AGAINST BARLEY BETA-GLUCAN, BUT SHOWED SIGNIFICANT ACTIVITY AGAINST AMORPHOUS AND CRISTALLINE CELLULOSE.
-1- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE

RT domains of cellobindy drollase I from Trichoderma reesel.";

RL Protein Sci. 6:294-303(1997).

CC :- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE CELORERALLY REDUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

CC :- GEMERALLY REDUIRES THAT CUT INTERNAL BETA-1,4-GLUCOSIDIC BONDS;

CC (2) ENOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

CC :- ENORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

CC (3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER CELLOBIOSE AND OTHER CC.

CC :- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non-

CC :- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non-

CC :- CATALYTIC ACTIVITY: BECOME TWO DIFFERENT EXOCELLOBIOSE TREESEI PRODUCES TWO DIFFERENT EXOCELLOBIOSES. THEY ARE UNIQUE IN THAT THEY CAN HYDROLYSE CONTROLASES. THEY ARE UNIQUE IN THAT THEY CAN HYDROLYSE CONTROLASES. THEY ARE UNIQUE IN THAT THEY CAN HYDROLYSE CONTROLASES. THEY ARE UNIQUE IN THAT THEY CAN HYDROLYSE CONTROLASES. THEY ARE UNIQUE IN THAT THEY CAN HYDROLYSE CONTROLASES.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;
(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.

CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non-reducing ends of the chains.

SIMILARITY: BELONGS TO CELLULASE FAMILY C (FAMILY 7 OF GLYCOSYL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HYDROLASES).
SIMILARITY: CONTAINS 1 FUNGAL-TYPE CELLULOSE-BINDING DOMAIN (CBD).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S11439; S11439.

T. FWORTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE

C. (1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1.4-GLUCOSIDASES

C. (2) EXOCELLOBIOHYDROLASES THAT CUT THE DISACCHARIDE CELLOBIOSE

C. (3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

C. (3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

C. (3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER

C. (4) CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic

-1- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:

(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1.4-GLUCOSIDIC BONDS;

(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

(3) BETA-1.4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER SHORT CELLO-OLIGOSACCHARIDES TO GLUCOSE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CARBOHYD

-!- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE
GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:
(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1,4-GLUCOSIDIC BONDS;
(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE
FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;
(3) BETA-1,4-GLUCOSIDASES WHICH HYDROLYZE THE CELLOBIOSE AND OTHER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-APR-1990 (Rel.

-i- FUNCTION: THE BIOLOGICAL CONVERSION OF CELLULOSE TO GLUCOSE
GENERALLY REQUIRES THREE TYPES OF HYDROLYTIC ENZYMES:
(1) ENDOGLUCANASES WHICH CUT INTERNAL BETA-1,4-GLUCOSIDIC BONDS;
(2) EXOCELLOBIOHYDROLASES THAT CUT THE DISSACCHARIDE CELLOBIOSE
FROM THE NONREDUCING END OF THE CELLULOSE POLYMER CHAIN;

(1) Endoglucanases which cut internal beta-1,4-glucosidic bonds;
(2) Exocellobiohydrolases that cut the dissaccharide cellobiose from the nonreducing end of the cellulose polymer chain;
(3) Beta-1,4-glucosidases which hydrolyze the cellobiose and other short cello-oligosaccharides to glucose.

-- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PROSITE; PS00562; CBD_FUNGAL; 1
